

STYLEME

“Your style, instantly.”

1. Concept Name

STYLEME — “Your style, instantly.”

STYLEME is an in-store augmented reality shopping experience designed to help customers discover, virtually try on, and order products that may be unavailable in their size, color or not carried in the physical store.

2. Problem Statement

Customers may find something they want to purchase in-store, only to discover that the item is out of stock, unavailable in their size, or exclusively sold online. This can create a frustrating and disappointing shopping experience, especially when customers are already interested in making a purchase.

STYLEME addresses this issue by combining augmented reality, virtual try-on technology, trained sales representatives, and handheld devices that allow associates to order products directly for customers. Customers can choose to have their purchases shipped to their home or sent to the store for pickup.

To make customers more comfortable with ordering products they cannot physically try on, the AR experience allows them to see how selected clothing items could look on their body before purchasing.

Creating a more convenient, comfortable, and reliable shopping experience is important for the brand because a frustrating experience can lead to lost sales, decreased customer satisfaction, and reduced brand loyalty.

3. Proposed Digital Experience

The STYLEME experience would be located inside the store and designed to resemble a traditional dressing room so the technology still feels casual, familiar, and comfortable.

The centerpiece would be an augmented reality mirror that creates a 3D scan of the customer and digitally displays selected clothing items on their body. The items would be selected by the

customer with assistance from a sales representative using a handheld work device that is connected to the STYLEME mirror.

4. How It Works

1. Select

The customer works with a sales representative to select clothing items they are interested in trying.

2. Scan & Try On

The customer enters the STYLEME fitting area, where the AR mirror creates a 3D scan and virtually displays the selected clothing items on them.

3. Yes or No

While viewing each item, the customer can select ✓ **Yes** if they like the item or ✗ **No** if they do not.

4. Notify the Sales Representative

Once the customer finishes trying on their selections, they can tap the notification option on the mirror. This sends a ping to the sales representative's work device.

For privacy and comfort, the sales representative cannot see what is happening inside the fitting area while the customer is using the mirror.

5. Consult & Order

After completing the virtual try-on, the customer can meet with the sales representative to discuss the items they liked, available sizes, colors, and ordering options.

6. Choose Delivery

The sales representative can place the order using their handheld device. The customer can choose to have the item shipped directly to their home or sent to the store for pickup.

5. Value to the Customer

STYLEME creates a more convenient, personalized, and inclusive shopping experience.

- **Convenience:** Customers can order products that are unavailable in-store without having to leave and search for them online themselves.
- **Personalization:** Customers can virtually see how different clothing items may look on them before deciding what they want to purchase.
- **Inclusivity:** The experience can help support customers across a wider range of body sizes by making products available beyond the sizes typically stocked in-store.
- **Engagement:** Customers interact directly with the technology instead of simply being told that an item is unavailable.

- **Empowerment:** Customers have more control over what they want to try, what they like or dislike, and how they receive their purchase.
- **Comfort:** Customers can use the AR mirror privately without the sales representative watching their fitting-room experience.

Overall, STYLEME helps turn an otherwise disappointing “**we don’t have your size**” experience into an opportunity to find and purchase something the customer actually wants.

6. Value to the Business

STYLEME could help the business turn missed opportunities into sales by giving customers a way to purchase products that are unavailable in their local store.

Potential business benefits include:

- **Increased sales:** Customers can purchase items that are out of stock, unavailable in their size, or sold exclusively online.
- **Higher customer satisfaction:** Customers receive a solution instead of simply being told an item is unavailable.
- **Improved brand perception:** Providing an inclusive and technology-driven experience can position the brand as more innovative and customer-focused.
- **Greater customer loyalty:** A convenient shopping experience can encourage customers to return to the brand.
- **More efficient sales support:** Sales representatives can use handheld devices to quickly locate and order products for customers.
- **Better customer insights:** The customer’s Yes/No selections could potentially provide the business with insight into customer preferences and product demand.

7. Key Features

STYLEME AR Mirror

An augmented reality mirror that creates a 3D scan of the customer and digitally displays selected clothing items for a virtual try-on experience.

Connected Sales Representative Handheld Device

A handheld work device used by sales representatives to select products, check availability, and assist customers with ordering items.

Yes / No Selection System

Customers can select ✓ **Yes** or ✗ **No** while virtually trying on each item, allowing them to quickly narrow down their choices.

Sales Representative Notification

Once customers finish their virtual try-on, they can notify a sales representative directly through the mirror.

Flexible Ordering

Customers can order their selected items and choose between **home delivery or in-store pickup**.

Private Experience

The sales representative receives the customer's notification but does not have access to view the customer inside the fitting area.

8. Potential Challenges

Technology Hesitation

Some customers may be uncomfortable using new technology or may prefer a traditional fitting-room experience.

Privacy & AI Concerns

Customers may worry about the AR system creating a 3D scan of their face or body and how that information is stored or used. Clear privacy policies, consent, and data protection would be important.

Accuracy of Virtual Try-On

Customers may question whether the clothing will fit or look the same in person as it does through augmented reality. The technology would need to provide realistic sizing and fit information while making it clear that the virtual experience is an estimate.

Cost & Maintenance

Implementing AR mirrors, 3D scanning technology, connected handheld devices, software, and ongoing maintenance could require a significant investment.

Technology Reliability

The experience would depend on reliable software, internet connectivity, and properly functioning devices. Technical issues could negatively impact the customer's experience if not addressed quickly.
